

ENTERPRISE AI DATA SCIENTIST

Hey OctOpus,
Connect my data warehouse.
Transform my sales data.
Show my top customers.
Build a *dashboard*.
Forecast next quarter's revenue.

Point OctOpus at your source — *Databricks, Snowflake, BigQuery, Postgres, a file* — and have a normal conversation. It connects, cleans, analyzes, builds live dashboards, and trains & deploys forecasting models — the work of a full data-science team, without the scarce, expensive hires. **10× the buyer base of Cursor:** every analyst, consultant, and operator is a potential user.

PARTNERS & PROGRAMS

THE PROBLEM

Reliable models, *on demand*, for decisions that cannot wait.

Getting from a raw warehouse to a decision still means exports, SQL, notebooks, packages, validation, retries, and deployment – work that demands data-science talent that's scarce, expensive, and already stretched thin. The whole loop is too technical and too manual.

01

Obsolete AutoML

Benchmarks models. Still needs an expert to frame the task, iterate, debug, and deploy.

- NO REASONING
- NO CONTEXT
- NO SELF-DEBUG
- NO DEPLOYMENT

02

Pain / Complexity

Reliable models still mean notebooks, coding tools, packages, MLOps, and expert back-and-forth.

- NOTEBOOKS
- CODING TOOLS
- PACKAGES
- MLOPS
- EXPERTISE
- TIME

03

Reliability and speed

OctOpus is AI-native. It does the reasoning and turns one question into a reliable deployed model.

DATA SCIENTISTS	BUSINESS USERS
Build and deploy reliable models faster and more frequently.	"Forecast X per Y for Z." Ask on real data, get visuals and dashboards, then build and deploy the model.

ONE CONVERSATION

From your *raw warehouse* to a clean answer, a live dashboard, and a deployed model.
You just talk — and get senior data-science work, on demand.

- 01 →

“Connect to my sales data in Databricks.”

OctOpus connects to your source – Databricks, Snowflake, BigQuery, Postgres, or a file – and loads it. No export, no query.
- 02 →

“Clean it up and show me my top customers.”

It transforms the data and answers – your top customers, ranked, with the numbers behind it.
- 03 →

“Build me a dashboard from this.”

It generates a live, interactive dashboard of your sales – no BI tool, no setup.
- 04 →

“Forecast next quarter's revenue — train a model.”

It builds, tests, and deploys a forecasting model, then has a prediction. One conversation, raw data to deployed model.

THE STORY BEHIND THE COMPANY

I went to bed. It went to work.

BUILT NIGHTS AND WEEKENDS · WITH A DAY JOB

Real customers. Real money.

Real problems solved.

Customers don't just want a prediction. They want OctOpus to do the whole job — analyze the data, fill in their reports, hand it to their team ready to use. That's what we shipped.

MONTHLY REVENUE · USD

200 PEOPLE USING IT Analysts, researchers, consultants, big-company teams	13 PAYING CUSTOMERS \$20 a month each · sign up themselves, no sales call
9 ENTERPRISE POCS Logistics, lean management, deeptech, oil & gas, SaaS · US, France, Sweden, Africa	\$9K PAID POC REVENUE 4 of the 9 already converted to paid · the rest in late-stage trial

INBOUND CONVERSATIONS · Q2 2026

Volvo Group

SKF

Ericsson

AstraZeneca

Actemium

Active inbound discovery calls with Fortune 500 enterprises. No outbound sales — they came to us.

A REAL EXAMPLE

A factory client makes bottles. OctOpus analyzed their quality data, found the defects, and filled in *10 sections of their existing client report* — automatically. Their team just had to sign and send.

Writing code is easy. *Specialized knowledge and reasoning* are the moat.

Claude, Codex, and Cursor can all write code. The hard part is knowing what to test, what to fix, what to trust, and what to ship for a specific forecasting problem. OctOpus compounds domain knowledge and reasoning on every run.

	AUTOML TOOLS DataRobot, H2O,	CODING AGENTS Claude, Codex, Cursor,	HIRE A DATA SCIENTIST Strong, but slow and	OCTOPUS AI-native data science for specialists and operators Reason, analyze, train, report One system across analysis and data science
What they do best	Benchmark models Good for narrow structured ML flows	Write code Useful, but still waiting for instructions	Own the workflow Deep judgment, but one person at a time	
Specialized reasoning	X No real business context or adaptive judgment	~ General coding help, not forecasting expertise	✓ But expensive and not always available	✓ Specialized reasoning for real model-building decisions
Fixes failures and retries	X Stops at the benchmark	X You still have to diagnose and steer	✓ If the person has time	✓ Auto-repair, retry, and continue in hours
Who can use it	ML teams Still needs technical setup	Technical users Prompting plus code review required	A data scientist Usually a bottleneck for everyone else	Data scientists and other professionals Sales, finance, growth, ops, and analysts can do

WHY NOW · This wasn't possible 18 months ago. AI couldn't understand why it was wrong. Now it can. The category leader will be decided in the next two years – and OctOpus is shipping today.

HOW BIG IS THIS

Every team that decides with data is a customer. *That's the whole economy.*

Data science used to be locked behind scarce specialists. OctOpus turns it into software anyone on a team can use – which opens a market far larger than the data-science tooling category itself.

TAM \$300B Global spend on data science, ML platforms, analytics and the specialists who run them.	SAM \$70B The categories OctOpus replaces in one product: BI & dashboards (~\$38B) + data prep & transformation (~\$10B) + predictive analytics & AutoML (~\$25B).	SOM \$1.2B Analysts, operators and SMB-to-enterprise teams we can realistically win in 3 years.
---	---	--

BOTTOM-UP

90M+ knowledge workers touch spreadsheets and data every day. Winning just 1% at \$20-2K / month is multi-billion ARR – before a single enterprise contract.

TAILWIND

Predictive analytics is compounding ~20% a year, and every company is now budgeting for AI in 2026. The spend is moving toward outcomes – exactly what OctOpus sells.

SOURCES · Big data & analytics \$300-450B by 2026: [Fortune Business Insights](#) · [Straits Research](#) | BI \$32-41B: [Fortune BI](#) · [Mordor](#) | Data prep \$8-12B: [Mordor](#) · [Grand View](#) | Predictive analytics \$20-28B: [MarketsandMarkets](#) · [Fortune](#) | Growth 20-28% CAGR: [Grand View](#) · Figures directional; we grow seat-by-seat today and expand into outcome-based enterprise spend.

HOW WE MAKE MONEY

From *\$20 a month* to enterprise contracts.

FOR INDIVIDUALS

\$20/month

A student, consultant, or analyst who needs answers from their data – without hiring anyone.

- Use it as much as you want
- Upload any spreadsheet
- Get a working model
- Download a clean report

MOST INTEREST

FOR TEAMS

\$500–2K/month

A small team that needs many predictions but can't afford to hire more data scientists.

- Whole team has access
- Connects to your systems
- Custom reports
- Email + chat support

FOR BIG COMPANIES

Custom

A large company that needs OctOpus inside their existing tools, with their security rules.

- Runs in your environment
- Dedicated support
- White-glove setup
- Pay per result

LONG-TERM · As OctOpus gets more reliable, we shift to charging per result delivered – not per seat. Customers pay for outcomes. The math gets better for both sides.

Solo Founder

Doudou BA

FOUNDER & CEO · 100% OWNER

I built the product, the early traction, and the first sales on my own. I move faster because I do not wait for cofounder decisions. Deep technical depth, real enterprise AI experience, and direct sales instinct all sit in one founder. I am open to hiring exceptional people later – especially in engineering or enterprise sales – but I do not need a cofounder to make progress.

EDUCATION

PhD Machine Learning · Charles University · MSc Software Engineering (Blekinge) · MSc Data Science (CZU)

RESEARCH

4 peer-reviewed publications across forecasting, hydrology, and ML systems

MAERSK

Built production AI and automation used in 130+ countries · owned systems where a single outage cost an estimated \$50K within hours

SALES

Built early OctOpus sales myself · prior background in recruiting and retail sales

TEAM

Commission-based sales partners for distribution – variable cost, scalable reach

AWARDS

Winner – Big Angels Day AI category · Winner – UNDP AI Hackathon · multiple Maersk Star Awards

ECOSYSTEM

NVIDIA Inception · Founders Inc · AI Sweden Ignite · AWS for Startups · Google Cloud Credits · Station F Fighters

"Doudou, if passion got you funded, you'd be at *Series C* already."

— MARK SEAR · DIRECTOR OF AI & ENGINEERING, MAERSK

RAISING \$500K PRE-SEED · DELAWARE C-CORP · YC ROADMAP

Raising *\$500K* to build the category leader in AI-native data science.

USE OF FUNDS

~12-18 MONTHS RUNWAY

01 · FOUNDER Quit the 9-to-5 This round takes the founder full-time on OctOpus. No split focus. Maximum speed.	02 · TEAM Hire exceptional people Bring in freakishly good sales talent and key engineering firepower to scale faster.	03 · SCALE Win fast Scale the platform and go aggressively after the US and European markets. The category is wide open — speed decides who wins it.
